# Docker+Jenkins+Maven

# 1. 安装Jenkins

# 1.1 查找镜像

docker search jenkins

# 1.2 拉取镜像

docker pull jenkinsci/blueocean:latest

# 1.3 创建容器

```
docker run -d --name jenkins \
  --restart=always \
  -p 8080:8080 \
  -p 50000:50000 jenkinsci/blueocean:latest
```

# 1.4 访问Jenkins

## 1.4.1 访问

打开浏览器输入 http://ip:8080/

提示输入密码,密码路径 /var/jenkins\_home/secrets/initialAdminPassword

```
# 查看密码
```

docker exec jenkins cat /var/jenkins\_home/secrets/initialAdminPassword

## 1.4.2 进入插件安装页面

选择 安装推荐的插件

# 1.4.3创建管理员用户

新手入门				
<u></u>				
	另一个TE	管理员用户		
用户名:	admin			
密码:	••••			
确认密码:	••••			
全名:	admin			
电子邮件地址:	10086@china.com			
Jenkins 2.319.2			使用admin账户继续	保存并完成

# 2. 全局工具配置

## 2.1 **配置**JDK

容器自带JDK,进入容器查看JDK路径

```
# 進入容器
docker exec -it -u root jenkins /bin/sh
# 查看jdk路径
echo $JAVA_HOME
# 查看JDK版本
java --version

JDK

JDK 安装
新增 JDK

别名

jdk

JAVA_HOME

/opt/java/openjdk
```

□ 自动安装

## 2.2 配置Maven

# Maven 安装 新增 Maven Name maven iii 从 Apache 安装 版本 3.8.4 ▼

配置完成之后 点击 保存

## 2.3 安装插件

#### 主要安装3个插件,搜索插件名勾选,然后点击下载

- Maven Integration (maven插件)
- Git Parameter(git参数定义插件)
- SSH2 Easy)(远程服务器上传文件及执行脚本插件)

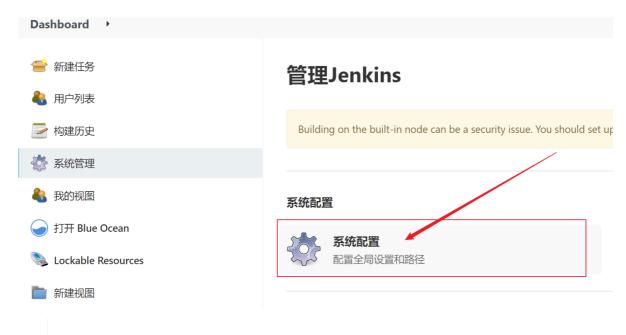

SSH2 Easy**在**Jenkins**上的存在**bug

com.jcraft.jsch:0.1.48 => com.jcraft.jsch:0.1.53

可以手动修改 com.jcraft.jsch:0.1.48 => com.jcraft.jsch:0.1.53 然后打包成hpi上传插件的方式安装

#### 安装完成之后重启Jenkins

# 3.配置远程服务器ssh连接

## **Server Groups Center**

#### Server Group List:

新增

Create the server groups for your projects

#### Server List:

新增

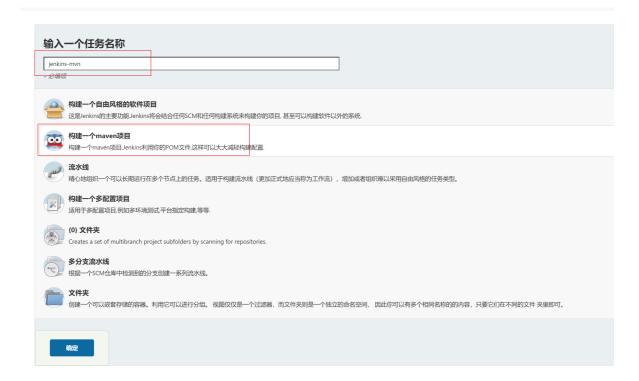

add the server under this server group for your projects

#### 新增组和服务器

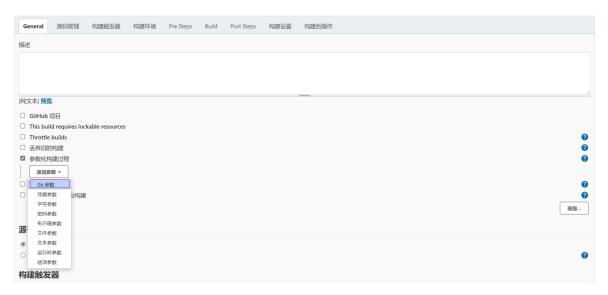

# 4.创建Maven项目

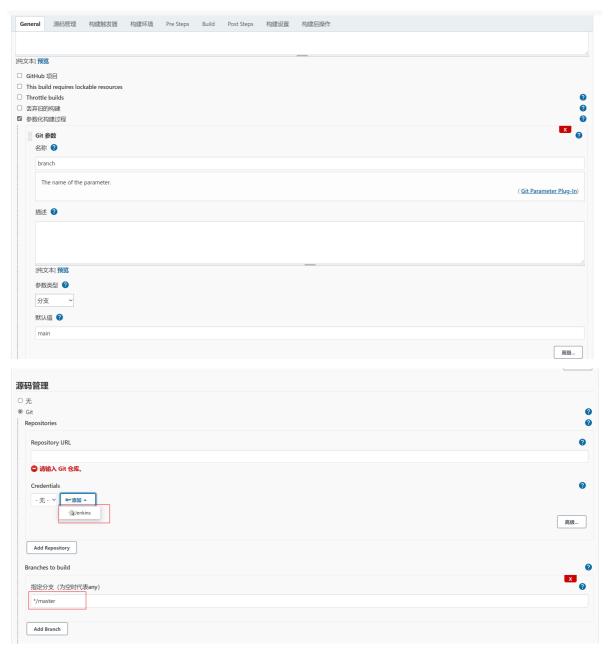

## 4.1创建Maven项目

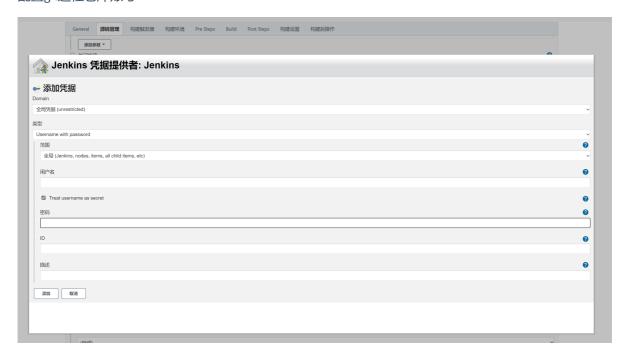

# 4.2配置git参数

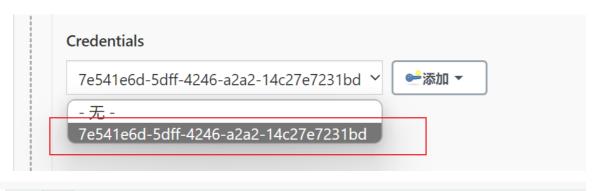

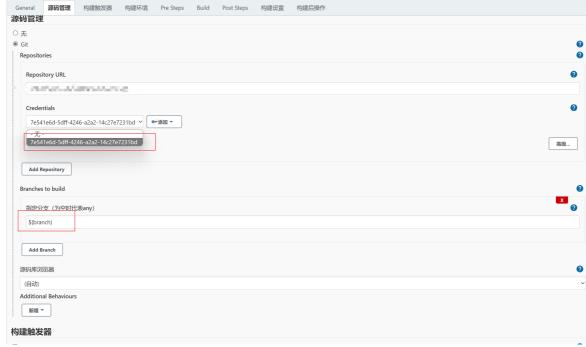

配置git

#### 配置git远程仓库账号

## 4.3 配置Maven打包命令

# 4.5 配置jar包上传指令

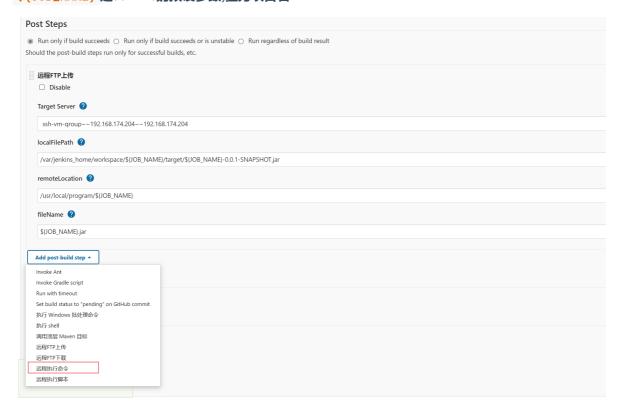

#### 上传Jar包配置

#### 注意,Jenkins打包好的文件在 /var/jenkins\_home/workspace/ 目录下,进入容器可以查看

#### \${JOB\_NAME} 是Jenkins的预设参数,值为项目名

## 4.6 执行远程命令

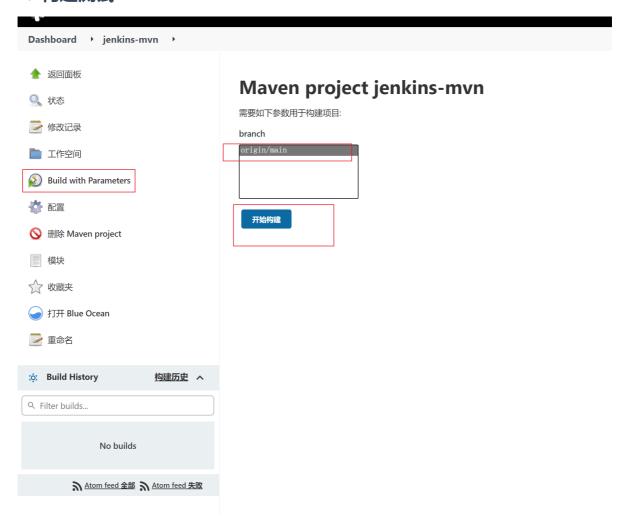

#### app.sh

```
#!/bin/bash
PROJECT_NAME=jenkins-mvn
# 日志前缀: jenkins-mvn-2022-02-02.log
LOG_PREFIX=/usr/local/program/${PROJECT_NAME}/logs/${PROJECT_NAME}/-${PROJECT_NAME}-
JAR_PATH=/usr/local/program/${PROJECT_NAME}/${PROJECT_NAME}.jar
# spring boot配置
ACTIVE=dev
usage() {
 echo "Usage: sh ShellName.sh [start|stop|restart|status]"
 exit 1
}
file_is_exist() {
  if [ -f "${JAR_PATH}" ]; then
    return 1
 else
    echo "${JAR_PATH} is not exist"
    exit 0
  fi
# shellcheck disable=SC2120
is_run() {
 file_is_exist
  #echo "ps -ef|grep ${JAR_PATH}|grep -v grep|awk '{print $2}' "
 pid=$(ps -ef | grep ${JAR_PATH} | grep -v grep | awk '{print $2}')
 if [ -z "${pid}" ]; then
   return 1
  else
    return 0
  fi
}
start() {
  is_run
  if [ $? -eq "0" ]; then
    echo "${JAR_PATH} is already running. pid = ${pid} ."
```

```
else
    # No default log is generated. Use logback or log4j2
    echo " nohup java -Xms512m -Xmx1024m -XX:+HeapDumpOnOutOfMemoryError \ "
   echo "-XX:HeapDumpPath=./ -jar \ "
    echo "-Dspring.profiles.active=${ACTIVE} \ "
    echo "${JAR_PATH} >/dev/null 2>&1 & "
    nohup java -Xms512m -Xmx1024m -XX:+HeapDumpOnOutOfMemoryError \
     -XX:HeapDumpPath=./ -jar \
      -Dspring.profiles.active=${ACTIVE} \
      ${JAR_PATH} >/dev/null 2>&1 &
    now_date=$(date +%Y-%m-%d)
    echo "If you need to view the log, please execute ' tail -20f
${LOG_PREFIX}${now_date}.log '"
   sleep 3s
  echo "tail -20f ${LOG_PREFIX}${now_date}.log"
   tail -20f ${LOG_PREFIX}${now_date}.log
 fi
}
stop() {
  is_run
 if [ $? -eq "0" ]; then
   echo "kill -9 ${pid}"
   kill -9 $pid
   echo "${pid} Stopping."
 fi
 echo "${JAR_PATH} is NOT running."
parameter() {
 echo "jinfo -flags ${pid}"
 jinfo -flags ${pid}
status() {
 is_run
 if [ $? -eq "0" ]; then
    echo "${JAR_PATH} is running. Pid is ${pid}"
   parameter
 else
    echo "${JAR_PATH} is NOT running."
 fi
restart() {
  stop
  start
}
case "$1" in
"start")
 start
"stop")
 stop
  ;;
"status")
  status
 ;;
"restart")
```

```
restart
;;
*)
usage
;;
esac
```

## 4.7构建测试

#### 控制台查看日志

#### tips

执行脚本远程服务器命令行,拓展一下,可以获取当前项目版本号,然后打个tag到git仓库,以及发布成功之后钉钉机器人推送等。
